PROJECT # Dairy Management System

Environment   : Linux, Python and Django, MySQL

Role   : Developer

Description:

This is the Dairy Management Product which caters various requirements for different dairy form Organizations. It includes modules like Farmers, Insurance, milk management, feed management, Bonus, Agents, Products. System also helps for Dairy managers and Farm managers to monitor animals and manage the products related to them.

Dairy Management Product is viable from very small Business unit to the extent of large scale Dairy Companies. We can customize this product based on client requirements. In a nutshell it handles almost all the workflow from collecting dairy ingredients to manufacturing Products.

Responsibilities:

• Writing reusable, testable, and efficient code

• Developing the code based on the client requirements.

• Integration of user-facing elements developed by front end developers with server-side logic.

• Transforming and Loading data based on requirement.

• Analyzing the story and get required clarifications from customer.

• Estimate the new requirement/change request.

• Creating/Enhancing Templates.

• Making day to day changes in the Product according to design decisions.
